5. DAX Measures
6. Dashboard Analysis
7. Key Insights
8. Business Recommendations
9. Conclusion

Executive Summary

This project analyzes Starbucks global store distribution and ownership patterns using Power BI. The objective was to transform raw store location data into actionable business intelligence insights through data cleaning, KPI development, geographic analysis, and interactive dashboards.

Business Problem

Starbucks operates thousands of stores worldwide. Decision makers require visibility into store distribution, ownership models, market concentration, and geographic expansion opportunities. The dashboard provides a centralized view of these metrics.

Dataset Overview

The dataset contains Starbucks store information including country, city, ownership type, geographic coordinates, and location details. The analysis focuses on store concentration, country-wise distribution, city-level presence, and ownership structure.

Data Cleaning & Preparation

- Inspected data quality and column structure.
- Checked and handled missing values.
- Removed unnecessary phone number fields.
- Eliminated duplicate records.
- Standardized country and city information.
- Prepared dataset for Power BI modeling and visualization.

DAX Measures

1. Total Stores = COUNTROWS(Starbucks) 2. Total Countries = DISTINCTCOUNT(Country) 3. Total Cities = DISTINCTCOUNT(City) 4. Avg Store per Country = Total Stores / Total Countries 5. Ownership Types = DISTINCTCOUNT(Ownership Type) 6. Avg Store per City = Total Stores / Total Cities

Key Insights

- Starbucks has a strong global footprint across dozens of countries.
- The United States represents the largest market by store count.
- China is among the fastest-growing and largest international markets.
- Store concentration is significantly higher in major metropolitan areas.
- Company-Owned and Licensed stores dominate the ownership structure.
- Geographic analysis highlights mature markets and expansion opportunities.

Business Recommendations

- Continue expansion in high-growth Asian markets.
- Use city-level concentration analysis for future site selection.
- Evaluate ownership strategies based on regional performance.
- Identify underserved regions for new store openings.
- Monitor market saturation in highly concentrated cities.

Conclusion

The Starbucks Global Store Intelligence Dashboard successfully converts raw location data into meaningful business insights. Using Power BI, DAX, and visual analytics, the project demonstrates skills in data cleaning, KPI development, dashboard design, geographic intelligence, and business storytelling.

Executive Overview Dashboard

This dashboard page provides interactive analysis of Starbucks store distribution, ownership patterns, and geographic intelligence.

Geographic Intelligence Dashboard

This dashboard page provides interactive analysis of Starbucks store distribution, ownership patterns, and geographic intelligence.
